

Bowler Environmental Systems: the solar thermal hot water specialists

Comments Bowler Group Managing Director, Stephen Bowler, "For quite some time, we were aware that whilst everybody was talking about the advantages of harnessing solar energy, very few organisations actually had the capability, know-how, personnel and systems necessary to provide the high quality solar energy solutions that both residential properties and commercial premises need.

"Consequently, in creating Bowler Environmental Systems in 2005," he continued, "we have put together a team of experts able to take on every aspect of a customer's conversion to solar energy - from initial advice, costings and savings projections through to final installation and commissioning of the system."

Turning natural energy into something useful and useable, reducing reliance on fossil fuels and helping minimise carbon footprints, Bowler Environmental Systems offer the latest high performance flat panel solar technologies that combine supreme efficiency, aesthetic appeal and a lifetime of virtually maintenance-free use.

Grant funding

As registered BRE/low carbon building programme installers, Bowler Environmental Systems are also able to advise on whether or not customers are eligible for partial grant funding, interest free loans or tax incentives to help cover the cost of installation.

70% of annual hot water provision

Designing and installing the latest solar technologies, Bowler systems are able to provide between 50 – 70% of typical domestic hot water requirements and close to 100% during summer months.

As energy prices continue to escalate, and more and more organisations are forced to consider the impact of their environmental footprint in terms of non-renewable energy used, Bowler Environmental Systems, part of roofing contracting and supplies specialists, Bowler Group, urges organisations of all sizes to consider the benefits of harnessing solar power.

A similar percentage saving can be applied to energy bills and reductions on carbon emissions. Concluded Stephen Bowler, "With significant energy and carbon emission savings available, we would encourage architects, specifiers, property developers, homeowners and property managers to contact us for full details of the capability of Bowler Environmental Systems.

About Bowler Group

Established in 1985, and boasting an unrivalled local reputation right across the South of England, Bowler Group has grown to become the roofing specialist that architects, specifiers, small builders, self-builders and numerous leading housing developers turn to for all their roofing requirements.

Split into four separate divisions, the Bowler Group of companies comprises of Bowler Roofing Supplies, Tanner & Hall Roofing & Interiors, Bowler Roofing Contractors and Bowler Environmental Systems.
